

# INSTALLATION GUIDE SAGA

## Follow These Steps:

1. Draw a level line on the wall to mark the top row and the center.
2. Repeat for each row underneath (10.5 cm / 4.13 inches in between).
3. Apply a line of construction adhesive about 2-3 cm / 1 in below the bottom line.
4. Push tiles against construction adhesive, starting from the center and moving outwards.
5. Repeat for each row and continue upwards. Let completed installation dry for 24 hours.

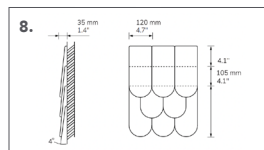

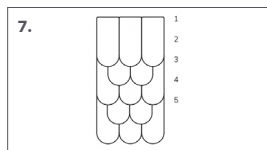

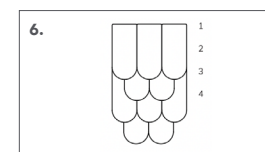

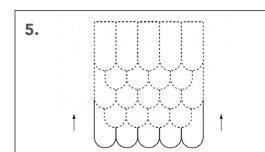

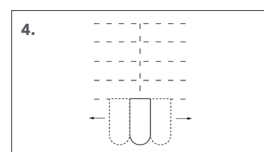

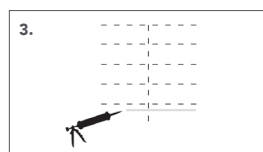

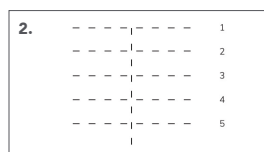

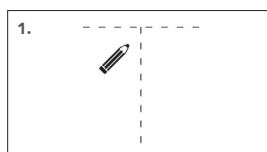

**The ending will differ depending on the number of rows.**

6. Ending with even row number.
7. Ending with odd row number.

## How to Calculate the Total Height of Installation

8. Length of bottom row tile shape + number of rows above x 4.1", rows are 4.1" apart (same row distance for all shapes), 80 x tiles cover 1m<sup>2</sup> (7.4 tiles / sqft)
